National AI Literacy Day (CEI)- March 27th, 2026

Here are **8 questions** for our **Industry + Higher Education AI Panel** with a **Colorado K-12 audience** (district leaders, educators, and workforce partners). The questions emphasize **future workforce readiness, skills, trends, and partnerships**—areas that align well with Colorado's career-connected learning and AI workforce conversations you often lead. I will direct questions to panelists that will be appropriate to answer from your perspective. We may not get to all the questions but have them ready if needed.

1. How is artificial intelligence currently changing the workplace in your industry or institution, and what new roles or responsibilities are emerging as a result?
Follow-up: What should K-12 educators understand about these changes today?

2. What are the most important skills students will need to succeed in an AI-enabled workforce?
Beyond technical skills, what **human skills (creativity, critical thinking, ethics, collaboration)** will matter even more?

3. Many school districts are exploring AI literacy and computer science pathways. From your perspective, what foundational AI knowledge should every high school graduate have?

4. How is Higher Education adapting programs, credentials, or degree pathways in response to AI and automation across industries?
Are you seeing **new certificates, micro-credentials, or interdisciplinary programs** emerge?

5. Work-based learning is a major priority in Colorado. How can industry and higher education partners create more internships, apprenticeships, or real-world AI experiences for high school students?

6. AI is evolving rapidly. How can K-12 schools design programs that stay relevant when technology changes so quickly?
What role should **industry advisory boards or partnerships** play?

7. What ethical considerations should students understand as they begin using AI tools in school and eventually in the workplace?
How should we prepare students to use AI **responsibly and thoughtfully**?

8. Looking ahead 5–10 years, what signals or trends should K-12 leaders watch closely to ensure students are truly prepared for the future workforce shaped by AI?
